EXPERIENCE

Senior Frontend Engineer

2023-01 - Present

Orbit Apps

Led frontend delivery for a multi-tenant analytics workspace.

- Built a reusable dashboard framework that reduced new analytics page delivery time by 40%.
- Introduced component contracts and visual regression checks across the design system.
- Partnered with product and data teams to ship AI-assisted report generation.

Frontend Engineer

Northstar Labs

Built collaboration features for a B2B SaaS product.

- Improved application startup performance by 32% through route-level code splitting.
- Created a typed API client shared by three product teams.
- Maintained accessibility standards for core task flows.

PROJECTS

AI Resume Publisher

Git-native static resume system with redaction, encrypted private views, and JD-specific variants.

- Designed a JSON Resume compatible data model.
- Built static publishing flow for GitHub Pages and Vercel previews.
